

JULIÁN ANDRÉS RESTREPO CASTAÑO

Junior Software Engineer — Backend, AWS Cloud & Agentic AI

Bogotá, Colombia • julianrestrepo012@gmail.com • +57 333 750 8344 • github.com/Julianlamaravilla

PROFESSIONAL SUMMARY

Junior Software Engineer with 4 months of experience building Kidar's ERP system from the ground up in Python (FastAPI) and AWS. Focused on Clean Architecture, cloud infrastructure, and AI agent integration with Anthropic Models. Refactored 20,000 lines of legacy code to Clean Architecture in 3 weeks, cutting development time by 40%.

TECHNICAL SKILLS

Backend: Python, FastAPI, Node.js, Java

Frontend: React.js, TypeScript, Tailwind CSS, HTML/CSS

Cloud (AWS): EC2, ECS, Lambda, API Gateway, RDS/Aurora, S3, VPC, ALB, Bedrock, AgentCore

Data & AI: MySQL, MongoDB, Anthropic Models, LiteLLM

Practices: Clean Architecture, Spec-Driven Development, Git, Docker

WORK EXPERIENCE

Junior Software Engineer

Kidar (kidar.co)

April 2026 – Present

Bogotá, Colombia

- Refactored 20,000+ lines of legacy code to Clean Architecture in 3 weeks, cutting development time by 40% and improving the ERP's maintainability.
- Designed and built a serverless proof of concept (AWS Lambda + Bedrock AgentCore) that saved the team 2 weeks of technical exploration.
- Shipped 6 features and resolved 4 to 8 critical data-integrity bugs within 1.5 months, working with Python (FastAPI), MySQL, and AWS (EC2, RDS, API Gateway, VPC).
- Collaborated directly with senior developers and business leads on architecture, requirements, and cloud infrastructure decisions.

FEATURED PROJECT

Adkio — Intelligent Ad Orchestrator

Personal project

github.com/Andss-ye/Adkio

- Platform that turns natural language into automated advertising campaigns for businesses and entrepreneurs, powered by Anthropic agents behind a REST API.
- Built with Python (FastAPI) on the backend and React, TypeScript, and Tailwind CSS on the frontend; deployed with Docker on Supabase and Railway.
