Julián Andrés Restrepo Castaño

Software Engineer · AI Engineering & Backend Systems

Bogotá, Colombia (Hybrid) · +57 333 750 8344 · julianrestrepo012@gmail.com · linkedin.com/in/jarestrepo
github.com/Julianlamaravilla · Portfolio: ptf-theta.vercel.app

PROFESSIONAL SUMMARY

Software engineer shipping AI systems to production. At DataCrédito Experian I built **EDF**, an AI-assisted ingestion framework (**50%+ faster** ingestion), and a **credit chatbot on an AWS Bedrock agent harness**. I also ship ML and multi-agent products. Strong backend foundation (Java, Scala, Python, AWS, CI/CD, testing); I build with AI daily using AI-DLC and ODD.

PROFESSIONAL EXPERIENCE

Kidar · *Software Engineer, AI Engineering & Backend* *May 2026 – Present · Bogotá*

DataCrédito Experian · EDF, AI Data Ingestion Framework — Scala, AWS, Generative AI

- Co-designed and built EDF, an AI-assisted data ingestion framework used by data engineering teams at DataCrédito Experian.
- Made data ingestion **50%+ faster** by wrapping generative models into a reusable framework embedded in the engineering workflow.

DataCrédito Experian · Credit Chatbot — AWS Bedrock, Java, Angular, Microservices

- Built a production credit chatbot on an **AWS Bedrock agent harness** that personalizes the credit experience, integrated with **5 microservices** under strict financial-sector security and compliance requirements.

Bitácora — Java, Spring Boot, React, AWS

- Built end to end (Spring Boot, React), deployed on AWS (ECS, API Gateway, Aurora, S3, Lambda) with Docker, CI/CD and JUnit/Mockito tests; in production, saving **USD 18,000/year**.

Internal Tools — Python, FastAPI, MySQL, AWS

- ERP and time tracking with automated tests (**−20%** project management cycle); refactored 20,000+ legacy lines to Clean Architecture (**−40%** time per feature).

Independent · *Freelance Developer* *Oct 2025 – Apr 2026 · Remote*

- Developed websites, web applications and Node.js APIs for clients, from requirements to deployment on Cloudflare (JavaScript, TypeScript).

AI & ML PROJECTS

IMA — Environmental Monitoring Index · *Python, FastAPI, LSTM, XGBoost, React, AWS EC2* *Jan 2026 – May 2026*

- Built a hydrometeorological forecasting PWA serving **LSTM and XGBoost** models through FastAPI on AWS EC2, with 24-hour multi-step forecasts and automated IDEAM-level alerts.
- Compared models on evaluation metrics (MAE, RMSE, R^2, F1, AUC); continuous alert checks every 3 minutes with push notifications.

Adkio — 2nd place, GTM Hackathon Bogotá 2026 · *Multi-agent, FastAPI, React* *May 2026*

- Multi-agent system that decomposes a marketing brief into platform-specific campaigns for Meta, TikTok and Google Ads · adkio.pages.dev

Sentinel — Yuno Hackathon (48 h, selected) · *Distributed systems, Fintech* *Dec 2025*

- Real-time payment anomaly detection across **7 Dockerized microservices** with PostgreSQL, built in 48 hours.

EDUCATION

Universidad EAN · *B.S. in Systems Engineering* *Expected graduation: Jun 2027*
Technical Degree in Software Programming *Completed*

TECHNICAL SKILLS

AI & ML: AWS Bedrock (agent harness), multi-agent systems, generative-AI frameworks, LSTM, XGBoost, model serving and evaluation
Languages & backend: Java, Scala, Python, Go, TypeScript · Spring Boot, FastAPI, Node.js, microservices, Clean Architecture
Cloud & DevOps: AWS (Bedrock, ECS, Lambda, API Gateway, Aurora, S3, EC2), Docker, CI/CD, Git, Azure DevOps
Data & frontend: PostgreSQL, MySQL, MongoDB, Redis · React, Angular, PWA
Testing & practices: JUnit, Mockito, Postman, TDD, Scrum, AI-DLC, ODD

CERTIFICATIONS & LANGUAGES

Certifications: AI-DLC Foundations (AWS) · AWS Cloud Foundations · Full-Stack Engineering with JavaScript (CodeSignal)
Languages: Spanish (native) · English (advanced)
